Is another world possible?...

The dilemma is very clear: to change the world radically so; to construct a new world from scratch or to build on the existing one. More and more areas are being opened up to the market, or to find a clear response in order to guarantee the rights of the people.

Introduction

The upcoming Scottish referendum on September 18 and the prospect of a similar vote in Catalonia spurred a debate on the successes and sustainability of small states. While much of the analysis that leaves the Scottish vote is devoted to legal issues, fiscal matters and the like, not there is a more general question: Are smaller states or states with a high per capita income in an increasingly competitive world? Can they lead to better economic outcomes?

Since 1945, the number of UN country members has risen from nearly 50 to 193, a nearly fourfold increase. In the world, two-thirds of all small states in the world have been formed in the past 70 years. Many of these have been born out of decolonization. In a recent Credit Suisse Research Institute report (from Spring to Research) we raised 67 examples of democracy since 1950, 46% of which include small states such as Georgia, Latvia, the Philippines, and others.

The Success of Small Countries

The global political economy has changed in a way that enables and challenges small countries. For one, globalization (as measured by global trade as a share of GDP) and the rise in the number of states have put pressure on small states and separate countries (G20 included) such as Dubai, Hong Kong SAR, Singapore and Ireland. One innovation in the study is our construction of the CS Country Strength Index, that helps to identify those small countries that are best placed to weather the pressures placed upon them by globalization.

Recent financial crises have also shown the fragility of small countries. They were the prominent financial and economic losers in the aftermath of the global financial crisis and the onset of the European crisis. While the impact on GDP from 2000 to 2014 has been most dramatic for the Baltic States, Ireland, Iceland, and Portugal. On the other hand, it is worth mentioning that older small countries such as Switzerland and Sweden fared much better.

We fully recognize that economic considerations are just one dimension of many when issues of statehood are at stake. Yet, there is no doubt the European crisis has

million people (commercial activities) and indirectly benefited another 4 million through philanthropic programs. Not all is good news, though. From 2002 to 2009, U.S. multinationals reduced jobs at home by 2.9 million, but created 2.4 million jobs abroad. In 2009, indirectly a very rough year for the global economy, these same multinationals cut 5% of their U.S. based workforce (1.2 million people), but only 1% of their workforce abroad (100,000 people).

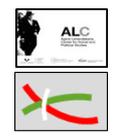

The impact of globalization on the host countries has been at the center of considerable debate. We reviewed general papers and articles and came to a few basic conclusions in the context of our analysis of large versus small countries.

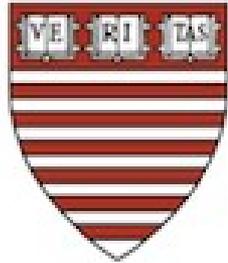

- First, we did not find that multinationals or large corporations tend to invest significantly more in large host countries than in small ones. It varies a lot from industry to industry. Several small countries tend to have a higher ratio of specialized services than large countries. These countries provide large pools of labor at very competitive rates. In addition, several host countries provide more attractive tax regimes and the ability to minimize the overall tax burden of corporations based on a percentage of GDP, and other small countries than for larger ones.
- Second, it is difficult to generalize the impact of large corporations or multinationals on host countries. In some cases, the effect has been modestly positive (e.g. Ireland), overall wage increases across the whole country's workforce, higher education, and better living standards. In other cases, the outcome has been quite negative, as the safety standards of some corporations abroad do not match the home standards.

In conclusion, while it is true that large corporations are more likely to develop initially in large countries, they are also likely to expand quickly beyond the home boundaries, benefiting the rest of the world. A successful small country can benefit from the good trends by investing in education and specializing to provide services that might be significantly more expensive or not available at all in larger host countries. Singapore, Ireland, and Switzerland are great examples of success stories in the growing trend of globalization.

**“Since 1945, the number of UN country members has risen from nearly 50 to 193...
...two-thirds of which could be classified as “small”...
...77% of all of the small states in the world have been formed in the past 70
“A successful small country can benefit from this global trend by investing in education...”**
